Catalysis from A to Z
A Concise Encyclopedia

The updated fourth edition of this successful encyclopedia contains 40% more high-quality content from over 200 international experts in four volumes. Comprehensive, succinct, and unrivaled, it includes all the knowledge scientists need on homogeneous, heterogeneous and biochemical catalysis in easy-to-use, compact entries for some 9,000 keywords in alphabetical order.

In this way it explains briefly the important terms for every aspect of catalysis, whether biocatalysis, homogeneous catalysis, heterogeneous catalysis, or such related topics as spectroscopy or analytical methods. These also include abbreviations, brief biographic entries of important scientists who have worked in catalysis, trade names, important catalytic processes, named reactions, reactions, and other important keywords in the general field of catalysis.

Finally, the German and French translations help non-native English speakers.
